

BLACKTECH PROJECT

Unipac was indeed honored to be awarded by Lexus, one of the most prestigious center in Malaysia, to supply the state of the art, Corgi BlackTech Alignment Machine. This latest revolution in passive target wheel alignment technology or 3D technology with 8 high definition NIR cameras, the first in the region, that uses 2 cameras for each target allows stereoscopic measurement assuring accuracy, repeatability and vast measurement range. NIR vision technology allows trouble free operation in even the most difficult ambient conditions thus the measurement of the characteristic angles of the cars at normal working level (lifted or on ground).
